KESTREL

Launch in one message. Spot the rug before it bites.

A Telegram launcher and risk scanner for Ascend on Elysium

ASCEND BUILDER INCUBATOR · NOVEMBER 2026 · RYAN HADI

Kestrel brings Ascend more launches, and safer ones.

01 · LAUNCHER

A coin from one Telegram message. No code, no dev buy.

02 · SCANNER

A plain-language risk card for every Ascend coin, not only ours.

03 · BUILDER FEE

Our only revenue, capped by Ascend, paid on trades that also pay Ascend.

40

coins launched on Ascend in about one hour. Creators showed up on day one.

Source: Kestrel reader · 40 most recent Ascend launches · Nov 9, 2026, ~03:40 UTC

0

of them came through a builder app.
The builder lane on Ascend is open.

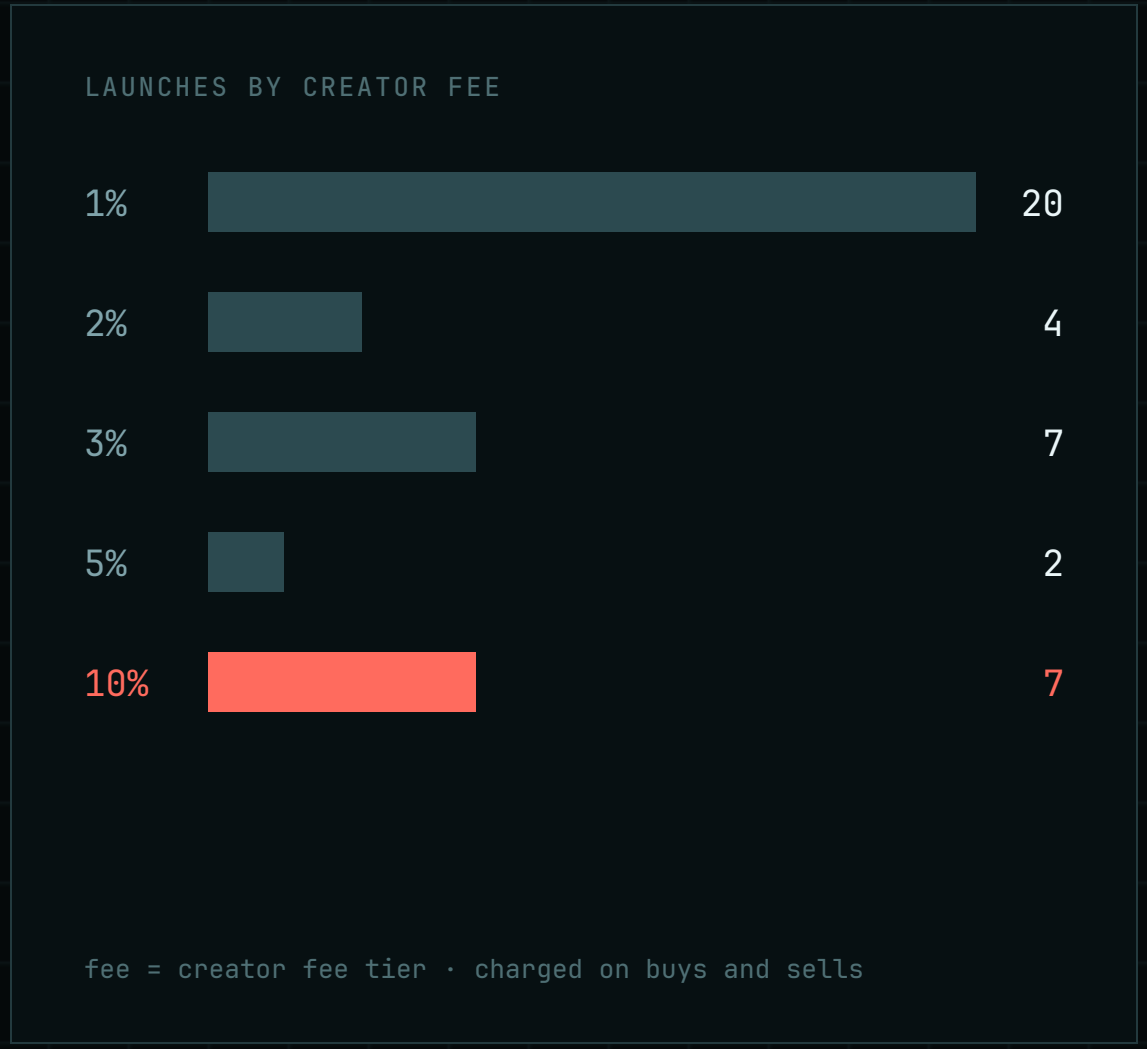

Source: builderFee = 0 on all 40 Launched events

One in six coins charges 10% on every buy and sell.

The fee is set in a contract event most traders never open. A wallet shows the price, not the toll.

11/40
opted out of community takeover

13/40
included a dev buy

Launching is hard. Reading a launch is harder.

CREATORS GIVE UP HALFWAY

Wallets, pair assets and fee settings stand between a community and its coin.

TRADERS BUY BLIND

Fees, dev buys and takeover opt-outs are all on-chain, but written in code.

We turn launch events into sentences.

WHAT THE CHAIN SAYS

```
Launched(
  poolId, token, creator, quote,
  supplySeeded,
  devBuyTokens = 2.06e25,
  fee          = 100000,
  builderFee   = 0
)
```

→

WHAT KESTREL SAYS

HIGH RISK

Expensive to trade: 10% fee on every buy and sell.

Creator holds 2.06% of supply from the dev buy.

Launch: one message, safe defaults.

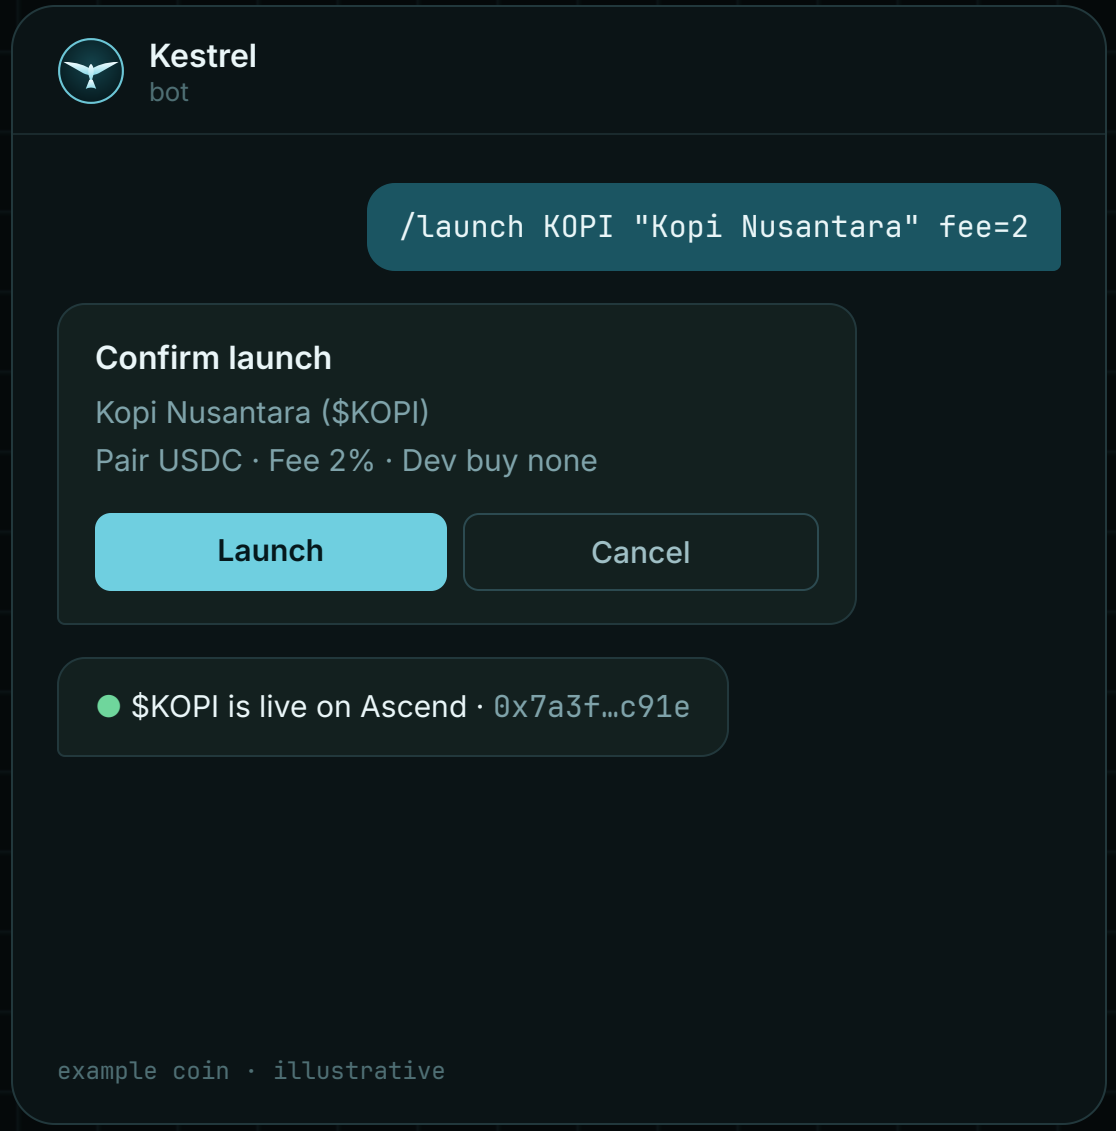

› set your wallet once

› no code, no gas from the creator

› no dev buy by default

› creator fees go to the creator's wallet

› simulated before anything is sent

Scan: every Ascend coin gets a card before anyone buys.

TICKER	FEE	DEV BUY	TAKEOVER	RISK
$HYPE	8%	18%	off	HIGH
$GPIX	3%	3.5%	on	MEDIUM
$KOPI	2.5%	0%	on	LOW

example coins from the live site
rule-based: every flag maps to an on-chain field

0x6666…6666 · 12m · HYPE pair

HIGH RISK

Hyper Moon $HYPE

- ▲ Ticker copies a well-known asset. Likely a copycat.
- ▲ Creator holds 18% of supply from the dev buy.
- ▲ Expensive to trade: 8% fee on every buy and sell.
- ▲ No community takeover if the creator leaves.

Every launch feeds the next one.

01

Launch →

One message brings a creator and their community.

02

Scan →

Every coin gets a card, so buyers trust the platform.

03

Trade →

Buyers trade with the facts in hand.

04

Earn ↻

Fees reach the creator, who comes back to launch again.

Kestrel earns only when Ascend earns.

ONE $1,000 TRADE ON A KESTREL COIN · 2% CREATOR FEE + 0.5% BUILDER FEE

$15
to the creator

$5
to Kestrel (builder fee)

$4.50
to Ascend protocol

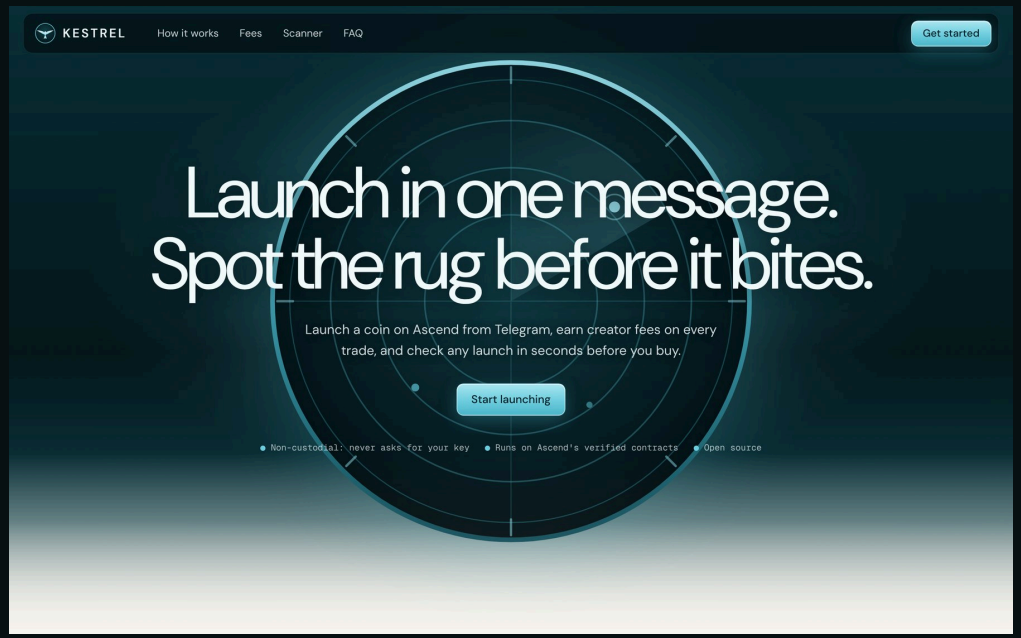

$0.50
buys back the coin

At $1M traded on Kestrel coins: $15k to creators, $4.5k to Ascend, $5k to Kestrel. The builder fee is capped on-chain by Ascend's multisig, at most 1%.

Shares from Ascend's fee table, $40k–$1M market cap band · per-$1M figures illustrative

Built, and checked against mainnet.

✓	scanner	live on Elysium mainnet, public RPC
✓	launch flow	launchChecked simulated on Ascend's mainnet contracts, USDC and HYPE pairs
✓	addresses	simulated outputs match predict()
✓	telegram bot	/launch /scan /new, channel alerts, English and Bahasa Indonesia
✓	tests	15 / 15 passing: calldata, risk rules, rate limits, escaping
○	live launches	wait on builder approval and a funded gas wallet

hadijayyy.github.io/kestrel

live scanner on Elysium mainnet

Safe by default, in code.

KESTREL DEFAULTS

```
custody       none          # no keys asked
simulate      always        # before every send
dry_run       on            # until switched off
rate_limit    1/user/day    # + global hourly cap
copycats      blocked       # tickers, hidden chars
builder_fee   ≤ 1%          # clamped to Ascend's cap
scoring       rules         # each flag = on-chain field
```

KNOWN RISKS

Spam launches

Rate limits and the copycat filter.

Hot wallet

It pays gas only and holds a minimal balance.

No audit yet

A launch-flow review is the first line of the budget.

Milestones you can check on-chain.

DAY

30

Live on mainnet

Bot live with /scan and alerts. First 25 coins launched through Kestrel.

DAY

60

Builder fee on

Approved builder fee live. 150 launches. 1,000-member alert channel.

DAY

90

More launch types

Holder Rewards and Buyback options. 500 launches. Public fee dashboard.

Measured by Kestrel's builder address on-chain · depends on builder approval and a reliable Elysium RPC

FOUNDER · INDONESIA (GMT+7)

Ryan Hadi

AI automation specialist. I build data pipelines, LLM agents and bots for businesses. Kestrel applies the same skills to on-chain data: event ingestion, automated analysis and chat interfaces.

hadijayyy.github.io

Shipped on launch day

Scanner, bot and site ran against Elysium mainnet on its first day.

Close to the users

Native to the Indonesian and Southeast Asian Telegram communities Kestrel targets.

Open source

All code is public, so reviewers can check every claim.

$15k

+ builder approval

Builder approval
A builderFeeCap for Kestrel's address, so launches carry the builder fee.

Indexer access
Partner access to Ascend's indexer for scanner and alert volume.

Distribution
A mention in Ascend's ecosystem pages and announcements.

PROPOSED USE OF $15,000

Security review of the launch flow	$4,000
SEA community growth	$4,000
Runway, 3 months (partial)	$4,000
Infrastructure, RPC and launch gas	$3,000
