KESTREL

Launch in one message. Spot the rug before it bites

Telegram launcher and risk scanner for Ascend on Elysium. Ascend Builder Incubator application, November 2026.

EXECUTIVE SUMMARY

More launches, and safer ones, for Ascend

For creators

Launch a coin from one Telegram message. No code, no gas, no dev buy. Creator fees go straight to their wallet.

For traders

Every Ascend launch gets a plain-language risk card built from on-chain data, before they buy.

For Ascend

Every launch and trade pays Ascend protocol fees. Kestrel earns only a capped builder fee on the same trades.

Status: scanner live on Elysium mainnet; bot built and simulated against Ascend's mainnet contracts. **Ask:** $15k and builder approval.

THE PROBLEM

Launching is hard. Reading a launch is harder

Creators give up halfway

Wallets, contracts, pair assets and fee settings stand between a community and its coin, and there is no easy way to prove a launch is clean.

Traders buy blind

Dev buys, a fee of up to 10% on every trade, where creator fees go, takeover opt-outs, copycat names: it is all on-chain, but written in code.

What the chain says

```
Launched(poolId, token, creator, quote,
  supplySeeded, devBuyTokens = 2.06e25,
  fee = 100000, builderFee = 0)
```

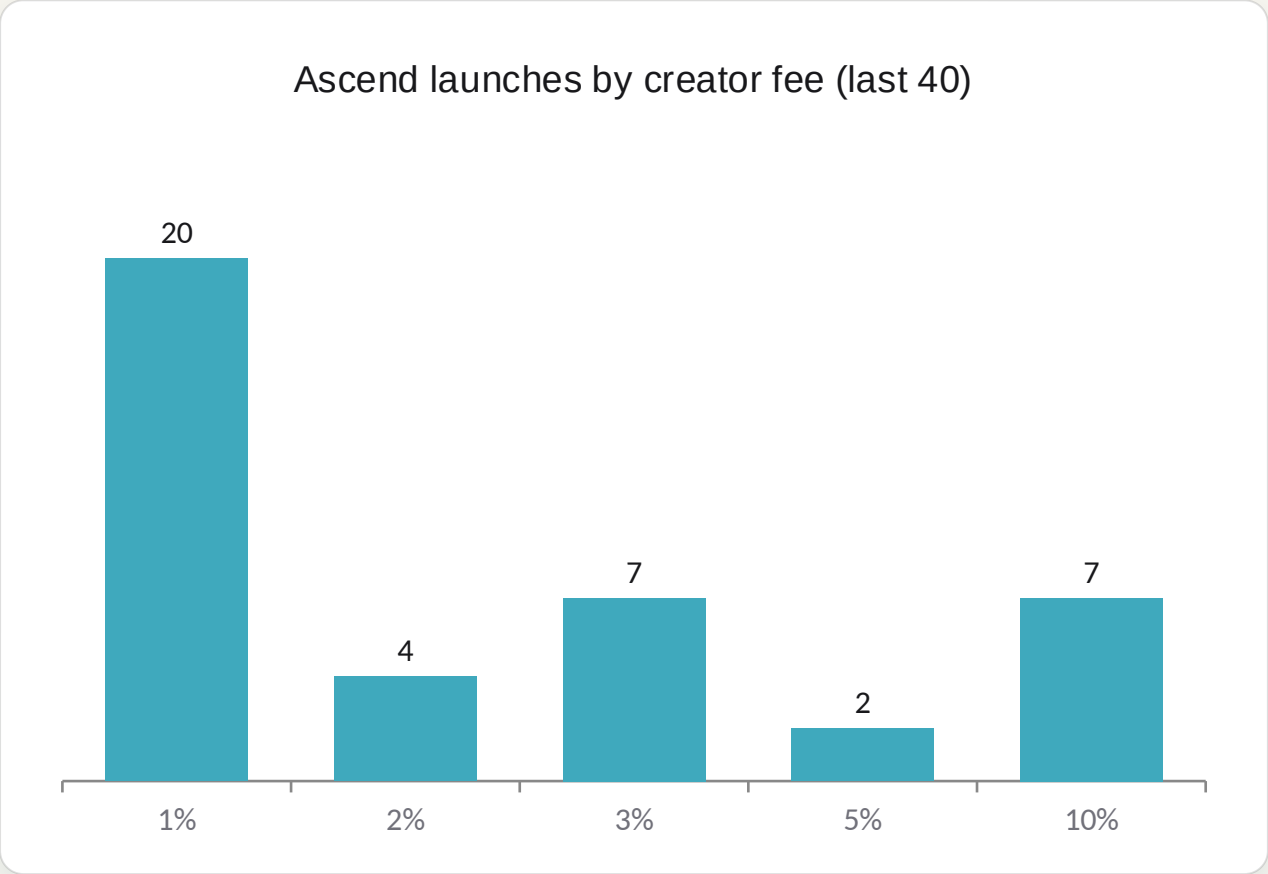

What Kestrel says

High risk

- Expensive to trade: 10% fee on every buy and sell.
- Creator holds 2.06% of supply from the dev buy.

DAY-ONE MAINNET DATA

Day one on Elysium: real demand, visible risk

40

Ascend launches in about one hour

0

launched through a builder app

11 / 40

opted out of community takeover

13 / 40

included a dev buy

Source: Kestrel's reader on Elysium mainnet, the 40 most recent Ascend launches (about 40k blocks), Nov 9, 2026.

THE PRODUCT

One bot to launch. One card to check

Kestrel bot

```
/launch KOPI Kopi Nusantara fee=2
```

Confirm launch: Kopi Nusantara ($KOPI)
Pair USDC · Fee 2% · Dev buy: none

$KOPI is live on Ascend · 0x7a3f…c91e

LAUNCHER

Wallet once, /launch, one tap. Safe defaults.

Hyper Moon

High risk

$HYPE · HYPE pair · 8% fee

- Ticker "HYPE" copies a well-known asset.
- Creator holds 18% of supply from the dev buy.
- Expensive to trade: 8% on every buy and sell.
- No community takeover if the creator leaves.

SCANNER

Every Ascend coin, scored from on-chain fields.

HOW IT WORKS

Every launch feeds the loop

01 Launch
One Telegram message, safe defaults

02 Scan
Every coin gets a risk card

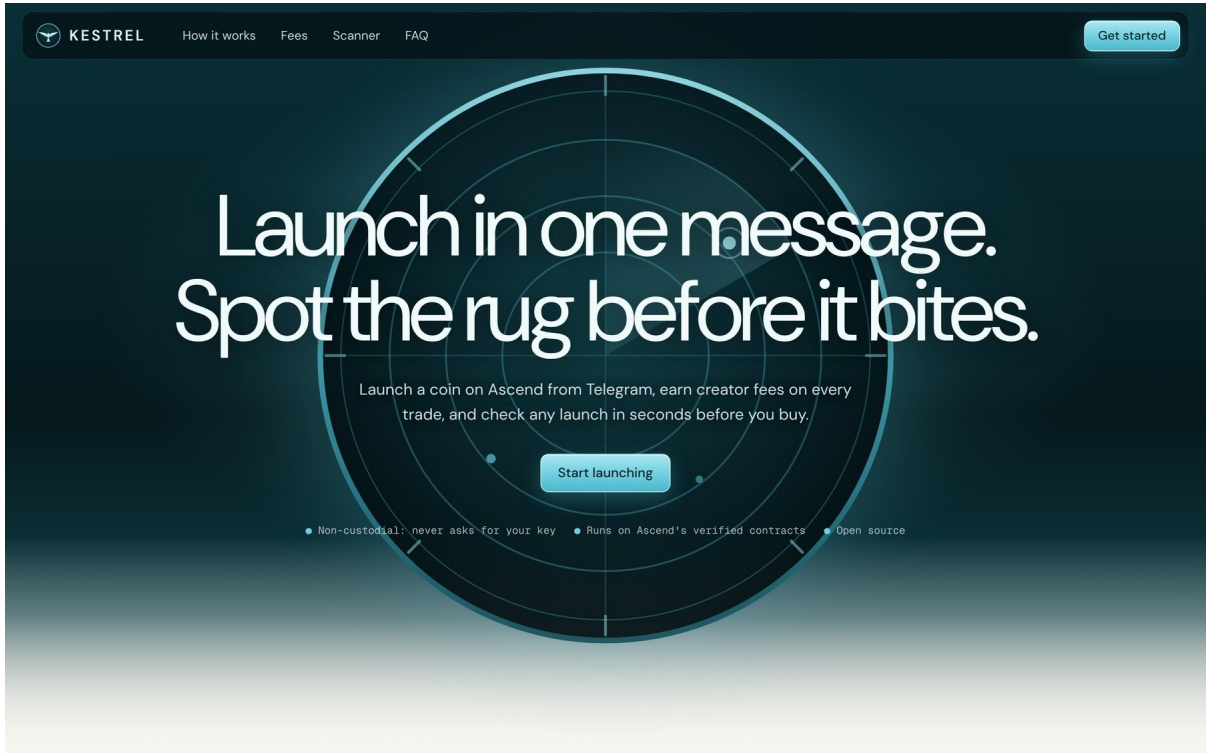

Creators launch, traders check before they buy, fees flow on-chain, and better launches bring more traders.

03 Trade
Buyers trade with the facts in hand

04 Earn
Fees paid on-chain to the creator

WHERE WE ARE

Built, and verified on mainnet

hadijayyy.github.io/kestrel: live scanner on Elysium mainnet

Web scanner live on mainnet

Loads and scores real Ascend launches from the public Elysium RPC.

Launch flow verified

launchChecked simulated on Ascend's mainnet contracts for USDC and HYPE pairs; outputs match predict().

Telegram bot built

/launch, /scan, /new, channel alerts, English and Bahasa Indonesia.

15 automated tests

Calldata, risk rules, rate limits, config and HTML escaping.

Not live yet: the bot process and real launches. They wait on builder approval and a funded gas wallet.

BUSINESS MODEL

Kestrel earns only when Ascend earns

One $1,000 trade on a Kestrel-launched coin

2% creator fee + 0.5% Kestrel builder fee, coin at $40k to $1M market cap

You, the creator	**$15.00**
Kestrel builder fee	**$5.00**
Ascend protocol	**$4.50**
Coin support (buys the coin)	**$0.50**

Per $1M traded on Kestrel coins (illustrative, same settings)

$15k
to creators

$4.5k
to Ascend protocol

$5k
to Kestrel

≤1%
builder fee, capped on-chain by Ascend's multisig

The right builder for Ascend, right now

Distribution where traders live

Telegram-native, in English and Bahasa Indonesia, starting with Southeast Asian communities.

Trust as a feature

Risk cards cover every Ascend coin, not only ours, which lifts buyer confidence across the platform.

Aligned by design

Zero custody and no token needed to start. Revenue is a builder fee on the volume we bring to Ascend.

builder apps launching on Ascend on day one. The launcher lane is open.

RISK CONTROLS

Safe by default

Non-custodial

No keys asked and no dev buy. The bot only pays gas.

Simulate first

Every launch is simulated before sending; dry run by default.

Rate limits

One launch per user per day, plus a global hourly cap.

Copycat filter

Well-known tickers and hidden characters are blocked.

Capped fee

Builder fee clamped to Ascend's on-chain cap, never above 1%.

Transparent scoring

Rule-based; every flag maps to an on-chain field.

FIRST 90 DAYS

Milestones, measured on-chain

Day 30

Live on mainnet

- Bot live with /scan and alerts
- First 25 coins launched through Kestrel

Day 60

Builder fee on

- Approved builder fee live
- 150 launches
- 1,000-member alert channel

Day 90

More launch types

- Holder Rewards and Buyback options
- 500 cumulative launches
- Public launch and fee dashboard

Measured by Kestrel's builder address on-chain. Dependencies: Ascend builder approval and a reliable Elysium RPC.

TEAM

Built by a founder who ships

RH

Ryan Hadi

Founder · Indonesia (GMT+7)

AI automation specialist: builds data pipelines, LLM agents and bots for businesses. Kestrel applies the same skills to on-chain data: event ingestion, automated analysis and chat interfaces.

hadijayyy.github.io

Shipped on launch day

Scanner, bot and site were running against Elysium mainnet on its first day.

Close to the users

Native to the Indonesian and Southeast Asian Telegram communities Kestrel targets.

Open source

All code public on GitHub, so reviewers can check every claim.

THE ASK

$15k and builder approval

What we ask from Ascend

Builder approval

A builderFeeCap for Kestrel's address, so launches carry the builder fee.

Indexer access

Partner access to Ascend's indexer for scanner and alert volume.

Distribution

A mention in Ascend's ecosystem pages and announcements.

Use of $15,000 (proposed)

Security review of the launch flow	$4,000
SEA community growth	$4,000
Runway, 3 months (partial)	$4,000
Infrastructure, RPC and launch gas	$3,000
